

XM/Satellite radio provides great benefit to everyday workers who commute long distances (like me) and having access to weather and traffic and other specialized programming during our long commute is huge help. The ability to avoid accident and high volume areas can reduce additional delays and may reduce road rage incidents. Denver is a town that traffic is not offered today. I would love to see traffic and weather (24 hrs/day) be available in Denver. PLEASE REJECT NAB's PETITION 04-160, the NAB lobby is not in the right on this issue.

Respectfully. James Valles, taxpayer, registered voter, XM radio user.
